Dear Customer,

Thank you for choosing our product.

Please read these instructions carefully before connecting and using the appliance.

Knowledge of the operating principles will help guarantee correct and safe use of the appliance. This instruction booklet contains the technical characteristics of the washing machine and is full of useful information regarding its operation, all designed to help you get the best out of your appliance. If the appliance is sold or handed over for use by others, remember to give the new user the instruction booklet.

NOTES AND ADVICE FOR THE USER

Before connecting the appliance read these instructions carefully. Repairing the failure arising from inappropriate connections or use of the appliance is not covered by the guarantee.

- This appliance has been designed for use as a domestic washing machine. Any other use is considered as improper and therefore dangerous.
- Any modifications or attempts to interfere with the washing machine can be dangerous for the user and may damage the appliance itself.
- Considering the substantial weight of the washing machine, specific safety standards must be observed during handling.
- The washing machine must not be used by children unless supervised.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
- Any modifications to the mains water or electricity supply must be carried out by authorised technicians only.
- When positioning the washing machine, ensure that the power supply cable is not kinked or squashed and is accessible.
- Before using the washing machine, remove all the packing and locking devices used for the transport (locking screws). If this is not done, serious damage may be caused to both the appliance and your home.
- If the washing machine is installed on a carpeted floor, leave sufficient space between the appliance and the floor to guarantee the free circulation of air.
- Do not overload the washing machine.
- When the appliance is in operation, avoid any contact with the water being discharged through the drain hose, as it may be very hot.

Do not touch the door glass either, as this will tend to heat up during washing.

Use the washing machine for machine-washable items only. In the case of any doubts, refer to the manufacturer’s instructions on the label attached to the item to wash (see “Clothing care symbols”).

Before placing the washing in the washing machine, make sure that all pockets are empty. Hard or pointed objects such as coins, pins, nails, screws or stones can cause serious damage to the appliance.

Never wash items that have been soiled with substances containing petrol. In the case where stains have been removed using vaporising products, wait until these substances have fully evaporated from the surface of the material before loading into the washing machine.

The use and quantities of detergent, softener and bleach must comply with the instructions reported on the packaging.

Do not use detergents designed for hand washing, in that the excessive suds produced could damage the internal components.

After washing mats, blankets or any other long-fibre materials, remove the filter and clean it if necessary.

It is advisable to leave the door open at the end of the wash cycle.

Do not attempt to repair any appliance faults alone, in that repairs carried out by a non-professional may cause serious damage and will invalidate any rights to repairs under guarantee.

Repairs to the appliance can only be carried out by personnel authorised by the customer service centres. All repairs must make use of original spare parts only.

This appliance is marked as complying with European Directive 2002/96/EC, Waste Electrical and Electronic Equipment (WEEE). Make sure that the product is disposed of in a correct manner. The user is obliged to contribute towards preventing negative consequences for health and the environment.

The symbol affixed to the product or accompanying documents signifies that the product must not be treated as normal domestic refuse, but must be delivered to an authorised collection centre to enable the electric and electronic equipment to be recycled. When disposing of the appliance, comply with local waste disposal regulations. For further information on the treatment, recovery and recycling of this product, refer to the appropriate offices, local domestic waste collection service or the retailer from where the appliance was purchased.
NOTES AND ADVICE FOR THE USER

Never insert or remove the plug from the mains socket with wet hands.

The washing machine must be connected to a mains socket fitted with an efficient earth complying with current safety standards.

Do not use extension leads or multiple plug adapters to connect the washing machine to the mains electricity supply.

Do not expose the appliance to atmospheric agents.

The door can only be opened approximately three minutes after the end of each wash, as a safety device has been fitted to protect from accidental opening.

When servicing or cleaning the washing machine, remember to disconnect it from the mains electricity supply.

Do not pull the power supply cable to unplug the washing machine from the mains supply. Pull the plug only.

It is advisable to unplug the washing machine from the mains electricity supply and close-off the water supply after each wash.

THE MANUFACTURER WILL NOT BE HELD RESPONSIBLE FOR ANY INCIDENTS RESULTING FROM NON-COMPLIANCE WITH SAFETY STANDARDS OR THE REQUIREMENTS OF THIS INSTRUCTION BOOK.

DESCRIPTION OF THE APPLIANCE

The washing machine has been constructed in steel panels which have been treated and painted to guarantee that its aesthetic qualities remain unaltered over time.

The motor and all moving parts have been designed and manufactured to guarantee the minimum possible noise levels.

The large easily-accessible stainless steel drum will ensure a better quality wash and help to prolong the life of your washing.

The wide door makes loading and unloading the washing much easier.

The very high stability of the appliance is the result of constant research by our technicians into the equilibrium of masses in movement.

A - Door
B - Filter
C - Adjustable feet
D - Top cover
E - Drum
F - Control panel
G - Detergent drawer

THE MANUFACTURER WILL NOT BE HELD RESPONSIBLE FOR ANY INCIDENTS RESULTING FROM NON-COMPLIANCE WITH SAFETY STANDARDS OR THE REQUIREMENTS OF THIS INSTRUCTION BOOK.
LEVELLING THE WASHING MACHINE

After having selected the most suitable location for the appliance, make sure it is level by regulating the adjustable feet (Fig. 6).

Pay particular attention to the positioning and levelling of the washing machine and make sure that the lock nuts are tight.

If the appliance is not levelled correctly, it will be unstable and noisy and may cause damage.

If the washing machine is installed on a carpeted floor, leave sufficient space between the appliance and the floor to guarantee the free circulation of air.

It is not advisable to install the appliance in rooms where the temperature could fall below 0°C.

In the under-worktop versions, screw in the feet until the spring is fully compressed, thus allowing the appliance to be installed under the worktop (Fig. 7).

WARNING!! The washer/drier version must not be installed behind a locked door, a sliding door or with a hinged door on the opposite wall to the washer/drier itself.
The mains water pressure must be between 0.05 and 1.00 Mpa (0.5 - 10 bar.)

▼ Before connecting the washing machine, open the valve and allow a certain quantity of water to flow out in order to clean the pipes of any sand or rust. This operation is particularly important in the case where the washing machine has been left standing for a long time or when connecting to a new water supply system.

▼ The fill hose must be connected to the mains supply using a ¾” threaded connection.

N.B. On electronic washing machines fitted with a dual solenoid valve (hot and cold water), connect the red hose to the hot water supply valve and the other hose to the cold water supply valve.

If a hot water supply is not available, both hoses must be connected to the cold supply using the fitting supplied (see fig. 9)

▼ Connect the fill hose (fig. 10).

N.B. Washing machines and condensation type washer/driers must be connected to the mains water supply using the new hoses provided with the appliance. The old hoses must not be re-used.

▼ During the wash, the water supply valve must be fully open.

▼ The drain hose must be positioned at a height of between 60 cm and 90 cm (fig. 11).

▼ If the water is drained directly into the drainage system, the free end of the drain hose must be inserted in a pipe of internal diameter not less than 40 mm.

▼ The drain hose connection to the drainage system must not be hermetically sealed, as this would cause a build up of air in the siphon and allow water to leak out.

▼ If the wash water is drained into a washbasin, sink or other similar system, the free end of the hose must be reinforced at the bend using the bracket supplied with the washing machine. Place the hose over the edge of the washbasin and anchor the bracket in such a manner that prevents the hose from falling (fig. 12). The washbasin outlet must be clean and must allow the water to flow freely.
**INSTALLING THE WASHING MACHINE**

**CONNECTING TO THE MAINS ELECTRICITY SUPPLY**

- Make sure that the voltage indicated on the identification plate attached to the inside of the filter door corresponds to that of the mains supply (fig. 13).

All cut-outs, electric wiring and mains sockets must have a rating such that enables them to support the maximum load indicated on the identification plate.

Once the appliance has been installed, it must be connected to the mains supply through a single-pole switch.

The mains supply to which the appliance is connected must be fitted with an earthing system. If this is not the case, the manufacturer will not be held liable for any incidents that may occur (fig. 14).

If the mains socket to which the appliance is connected is faulty or unsuitable, it must be replaced by a qualified electrician.

The washing machine must not be connected to the mains supply using indirect methods such as extension leads or multiple adapters.

During maintenance work, the washing machine must be disconnected from the mains electricity supply.

Do not insert or remove the plug from the mains socket with wet hands.

If the power supply cable is damaged in any way, contact the appropriate specialised service centre.

The plug used to connect the machine to the power supply must never be fixed behind the machine, but must be in a position easily accessible in an emergency.

---

**USING THE WASHING MACHINE**

**RECOMMENDATIONS PRIOR TO USE**

- **Warning:** Before carrying out the first wash, allow the washing machine to effect a short wash cycle without any washing. This will allow the operation of the washing machine to be checked and will clean the drum.

Before each wash make sure that:

- ▼ the water connections are correct, the drain hose is properly positioned (see connecting to the water supply) and that the water supply valve is open.
- ▼ with dry hands, insert the plug in the mains socket.
- ▼ sort the wash into types of fabric (refer to clothing care symbols).
- ▼ check that there are no objects left in any of the pockets of the items to wash, as these may damage the washing, the appliance or the filter.
The washing machine is fitted with a three-compartment detergent drawer

1. compartment for pre-wash or soak soap powder (1)
2. compartment for normal wash soap powder (2)
3. softener compartment (3)

Use a low-suds detergent and softener (if required) recommended for automatic washing machines. Follow the dosage instructions written on the packet.

- **N.B.** Too much detergent can produce excessive suds and may result in a poor wash.
- Too little detergent will produce an unsatisfactory wash.

- **N.B.** When adding detergent to the dispenser, remember to avoid any spillage into the softener compartment, in that this would create a soapy rinse and stain the fabrics white. Vice versa, if softener is added to the detergent compartment, the quality of the wash will be compromised.

- **N.B.** When using a liquid detergent (recommended for programmes without pre-wash) proceed as follows: remove the baffle from its housing at the front of compartment 2 and insert it in the guides near the centre of the same compartment.

- ▼ close the detergent drawer before starting the wash.

- **Warning!** Do not attempt to remove the detergent drawer while the washing machine is in operation, as this will cause water to flow out.
**USING THE WASHING MACHINE**

**HOW TO REMOVE SOME STAINS**

Stains exist that cannot be removed by machine washing alone. Before trying to remove any type of stain by hand, first try the removal procedure on a small area of hidden fabric. Start from the edge of the stain and working inwards, this will prevent a dark ring from forming around the site of the stain. A few methods to adopt for removing stains are reported below.

- **Wax**: Scrape the wax using a rounded point in order not to damage the fabric. Then, with the fabric placed between two pieces of absorbent paper, run a hot iron over the stain.

- **Ball Point Pens and Felt-Tip Pens**: clean using a soft cloth soaked in ethyl alcohol. Take care not to spread the stain.

- **Damp and Mould**: if the fabric supports the use of bleach, carry out a wash cycle adding bleach. Otherwise, soak the soiled part in hydrogen peroxide (10 volumes) and leave for 10 to 15 minutes.

- **Light Scorch Marks Left by Ironing**: follow the instructions for mould and damp.

- **Rust**: use products specially designed for rust stains, following the manufacturer’s instructions written on the packet.

- **Chewing Gum**: rub ice over the fabric, scrape away as much chewing gum as possible and then rub with a piece of cotton soaked in acetone.

- **Paint**: do not allow the paint to dry. Rub the area with the solvent recommended by the paint manufacturer (e.g. water, turps, trichloroethylene), soap and then rinse.

- **Lipstick**: stains on cotton or wool can be eliminated using a cloth soaked in ether. Stains on silk require the use of trichloroethylene.

- **Nail Varnish**: place a sheet of absorbent paper on the stained material, then dampen the back of the fabric with acetone, frequently changing the absorbent paper placed over the stain. Continue in this manner until the stain has disappeared.

- **Tar or Dirt**: spread a little fresh butter over the stain, allow to stand and then wash with oil of turpentine.

- **Grass**: delicately soap the stain, use diluted bleach. Good results can be obtained on woolen fabrics using 90% alcohol.

- **Blood**: put into soak in cold water with added salt, then wash with washing soap.

**INTERNATIONAL CLOTHING CARE SYMBOLS**

Before placing the clothes in the washing machine and selecting the wash programme, examine the symbols on the manufacturer’s label. The table reported below will provide a useful guide to reading the symbols.

WASHING INSTRUCTIONS

Before using the washing machine, make sure that it has been installed correctly as reported in the instruction book.

Daily use

1. Before placing the washing in the washing machine, make sure that there are no hard pointed objects in the pockets (nails, screws, coins, pins, stones, etc.) as these can damage both the clothing and the appliance.

2. To improve the performance of the wash, place the washing loosely in the drum without compressing it. Do not overload the machine. A full load of particularly absorbent material such as bathrobes and towelling can unbalance the washing machine during the spin phase. The automatic load-balancing system distributes the washing as evenly as possible and automatically sets the best spin speed to reduce vibrations to a minimum.

3. Close the door, making sure that no washing has become trapped between the door and the gasket.

4. Place the correct amount of detergent in the appropriate dispenser 2. When using a liquid detergent, insert the partition supplied. If the Prewash function is required, add detergent to compartment 1. Add softener to the compartment marked with the symbol ☀. After adding the detergent, gently close the detergent drawer.

5. Choose and set the desired washing cycle program and temperature using the relative E and D knobs.

   WARNING!! Do not turn the programming knob to the left. If you pass the desired program, continue to turn to the right until you reach the desired position again.

6. Buttons B and C are used to select the extra functions.

7. To start the wash, turn on the machine by pulling out the programming knob or (if present on the washing machine) by pressing the On/Off pushbutton (the indicator light will turn on).

At the end of the washing cycle, the washing machine will stop at one of the STOP points on the programming knob.

1. Turn off the washing machine by pushing the programming knob in or (if present on the washing machine) by pressing the On/Off pushbutton.

2. Take out the laundry

3. With dry hands, unplug the machine

4. Close the water tap.
When this button is pushed, the washing machine will stop automatically at the end of the last rinse cycle and before draining the water. In this case, the washing is held in the water-filled drum to prevent creasing. This function only works for the delicate wash cycle.

To start the machine, pull programmer knob or if the machine has push-button, press the start push-button. The indicator light will be illuminated.

NO-DRAIN BUTTON

When this button is pushed, the washing machine will stop automatically at the end of the last rinse cycle and before draining the water. In this case, the washing is held in the water-filled drum to prevent creasing. This function only works for the delicate wash cycle.

NO-SPIN BUTTON

Pushing this button the washing machine carries out a normal wash cycle but does not spin.

EXTRA RINSE BUTTON

The washing machine has been designed to reduce water consumption to a minimum. Three rinse cycles are normally sufficient. For very soft water zones or for those who are allergic to detergent residues, press this button and the machine will carry out an extra rinse.

TEMPERATURE LIMIT BUTTON

Pushing this button will limit the temperature to 60° when the temperature dial is set at a higher temperature.

MAINTENANCE

CLEANING THE WASHING MACHINE

The washing machine has been specifically designed to reduce maintenance to a minimum. Nevertheless, it is important that it is cleaned regularly.

Before cleaning, make sure that the appliance has been disconnected from the power supply and that the water supply valve has been closed.

The external structure and the parts of the washing machine in plastic must be cleaned with a soft damp cloth only.

WARNING!! Never use chemicals, abrasive products, alcohol, soap, petrol or other solvents to clean the appliance as these may cause damage. (fig. 28)

After washing, leave the door open for a short time to allow rubber parts to dry.

Periodically wash out the detergent compartments. To do this, remove the detergent compartment and rinse it under running water (fig. 29). Then replace it.

REMOVING THE DETERGENT DRAWER

▼ open the detergent drawer;

▼ press on the word “PUSH” with the right hand and pull out the drawer with the left hand (fig. 30).

CLEANING THE FILTER

WARNING!! Before starting the operations described below, make sure that the washing machine is empty. Do not remove the filter while the washing machine is running, or when full of water.

Place a cloth or tray under the filter to collect any water that may still be inside. Open the filter door, unscrew the filter and remove it by turning it in an anticlockwise direction (fig. 31-32).

The filter must be cleaned periodically.

Rinse the filter under running water to eliminate any residues. Replace the filter by screwing it in clockwise, making sure it closes and seals properly.
If the appliance is not working properly, check through the following troubleshooting guide before calling for technical assistance.

**The washing machine does not work (warning lights are off) (Display off)**
- Make sure that:
  1) The mains power supply is working
  2) The plug is inserted correctly in the socket
  3) The On/Off button has been pressed, or if not present, check that the programming knob is positioned on a programme.

**The washing machine does not work (warning lights are off)**
- Make sure that:
  1) The programme has been selected
  2) The door is closed properly
  3) The “Start” button has been pressed (electronic models only)
  4) Refer to the information provided for “The washing machine does not fill with water”

**The washing machine does not fill with water**
- Check that:
  1) There is water in the water supply system
  2) The water fill pipe is connected to the washing machine
  3) The mains water supply valve is open
  4) The filter is not blocked. If it is, clean the filter after first unplugging the appliance from the power supply

**The washing machine continuously fills and drains the water**
- Check that:
  1) The drain hose has been installed at the correct height (60-90 cm)
  2) The end of the drain hose is not under water

**The washing machine does not drain or spin**
- Check that:
  1) The drain hose is properly connected
  2) The drain hose is not kinked
  3) The drain filter is not blocked
  4) The no-spin function has not been selected
  5) The Stop with water function has not been selected.

**The washing machine vibrates and is noisy**
- Make sure that:
  1) All the locking elements used for transportation have been removed.
  2) The washing machine is perfectly level
  3) Bulky items such as sheets, tablecloths etc. are not all bundled in one part of the drum

**The door will not open**
- Make sure that:
  1) The wash cycle has finished.
  2) The Stop with water function has not been selected (automatic on some models).

**The washing has not been spun properly**
- Make sure that:
  1) The washing is evenly distributed in the drum
  2) The correct spin speed has been selected

**The washing machine stops during a wash**
- Make sure that:
  1) The drain hose is properly connected
  2) The drain hose is not kinked
  3) The drain filter is not blocked
  4) The no-spin function has not been selected.

If, after all these checks have been carried out, the appliance still does not work, inform the nearest customer service centre.

When contacting the service centre, inform them of the appliance model, serial number and type of fault. The data relating the appliance can be found on the rating plate affixed to the inside of the filter door. This information will help the service centre operator in procuring the necessary spare parts, thus guaranteeing a speedy and efficient repair.
